INTRODUCTION

This congress on cannabis is a scientific initiative which intends to bring health and education professionals together, including students in the subject area of health and social care, as well as those interested in finding an answer to the problems following over consumption of cannabis, a matter which has experienced high growth rates in recent years.

WHY A CONGRESS ON CANNABIS?

According to the last survey by the World Health Organization about adolescent behaviour, teenagers are among the heaviest cannabis consumers. The increase in consumption has been associated with an earlier start in the same, circumstances that increase the risks.

MAIN PRINCIPLES OF THE CONFERENCE:

- >> Responds to a social and institutional commitment.
- >> Is led by professionals and health authorities in order to promote and coordinate the actions in this field.
- >> Follows the international guidelines and strategies of the World Health Organization and the European Union.
- >> Takes a global approach to the problem, fostering interdisciplinary collaboration.
- >> Aims at promoting health, quality of life and social inclusion.

OBJECTIVES:

Active participation in the conference will contribute to:

- 1/ Spreading information about the effects of cannabis on the health of active and passive regular users.
- 2/ Making attendants aware of the current regulation regarding the different aspects of cannabis production and use.
- 3/ Spreading information about the therapeutic effects of cannabis.
- 4/ Increasing the awareness of parents, teachers, health workers, and community leaders about their role as a model for the acquisition of healthy habits.
- 5/ Providing information to teachers and health professionals about the public health concern of cannabis use by adolescents and minors.
- 6/ Disseminating information about the pernicious effects of cannabis smoking for second-hand smokers, highlighting the importance of not smoking during pregnancy or in front of children, old people and patients.
- 7/ Helping teachers and health workers in their prevention and education on this behavior, aimed mainly at young people.
